

Patient Name : Rajesh Kumar Singh
Age / Gender : 40 years, Male
MRN : 2025-APL-456789

Date of Study : 19-05-2025
Scan Type : MRI Knee (Left)
Referring Doctor : Dr. Shailendra Mittal
MS Orthopedics

CLINICAL INDICATION:

Left knee pain and instability following sports injury

TECHNIQUE:

MRI of left knee performed using 1.5 Tesla machine with 3mm slice thickness

FINDINGS:

LIGAMENTS:	• ACL: Complete tear at the proximal third. Torn fibers separated with gap. • PCL: Intact • MCL: Intact • LCL: Intact
MENISCI:	• Medial Meniscus: Partial tear in posterior horn (bucket handle tear) • Lateral Meniscus: Intact
CARTILAGE:	• Femoral cartilage: Normal • Tibial cartilage: Normal • Patellar cartilage: Normal
BONE:	• No fractures • No bone edema • Normal marrow signal
JOINT EFFUSION:	• Moderate hemarthrosis (blood in joint)

IMPRESSION:

1. Complete ACL tear
2. Partial medial meniscus tear (posterior horn)
3. Moderate hemarthrosis
4. No fracture or cartilage damage

RECOMMENDATION:

Arthroscopic ACL reconstruction surgery recommended urgently.

Radiologist:

Dr. Vikram Patel, MD Radiology
Registration: MCI/67890
