#### PRESENTING COMPLAINT

Severe substernal chest pain, diaphoresis, and dyspnea. Patient brought to emergency department after acute onset of chest pain at home.

#### VITAL SIGNS AT ADMISSION

- BP: 95/60 mmHg (hypotensive)
- HR: 118 bpm (tachycardia)
- RR: 24/min (tachypnea)
- SpO2: 92% on room air (requires oxygen)
- Temperature: 37.5°C

#### ECG AND CARDIAC MARKERS

- ST elevation in leads II, III, aVF (Inferior STEMI pattern)
- T wave inversion in V1-V3
- Troponin I: 4.2 ng/mL (highly elevated; reference normal <0.04)
- CK-MB: 185 U/L (very elevated; reference normal <30)

#### DIAGNOSIS

**Acute ST-Elevation Myocardial Infarction (STEMI) - Inferior wall.**

#### PROCEDURE

|                                    |                                                                                                                                                                                                  |
|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Emergency cardiac angiogram</b> | Performed at 02:30 AM                                                                                                                                                                            |
| <b>Findings</b>                    | <ul style="list-style-type: none"> <li>- RCA (right coronary artery): 100% occlusion</li> <li>- LCx (left circumflex): 80% stenosis</li> <li>- LAD (left anterior descending): Patent</li> </ul> |
| <b>Intervention</b>                | <ul style="list-style-type: none"> <li>- Stent 1: Drug-eluting stent placed in RCA</li> <li>- Stent 2: Drug-eluting stent placed in LCx</li> <li>- TIMI III flow achieved</li> </ul>             |

#### POST-PROCEDURE STATUS

Patient stabilized post-procedure and shifted to ICU for continuous cardiac monitoring. Ventilator support documented as clinically required.

#### ICU CARE PLAN

- Continuous cardiac monitoring
- Mechanical ventilation as needed
- Inotropic support: Dobutamine and Adrenaline
- Antiplatelet therapy: Aspirin and Ticagrelor
- Anticoagulation: Heparin infusion
- Lipid-lowering therapy
- ACE inhibitor
- Serial troponin and ECG monitoring

#### PROGNOSIS

Guarded. Inferior STEMI with complications. Close monitoring required for 48-72 hours.

|                                                                                          |                                                                                    |
